About Advanced Drainage Solutions

Specialists in exterior drainage.

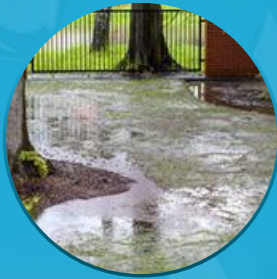

Wet Basement
or Crawlspace?

Flooding or
Standing Water?

Existing Drainage
System Failure?

Ground Saturation
around Home?

We are the solution
to your drainage issue!

We identify the cause of your drainage problem and correct it at the source. We diagnose, design, and install complete exterior drainage solutions. From quality PVC drainage systems to grading repairs and hardscapes, our solutions are custom, durable, and designed for **Lifetime Drainage Relief**.

www.OutdoorDrainageNashville.com

We **treat the problem,** not the symptom

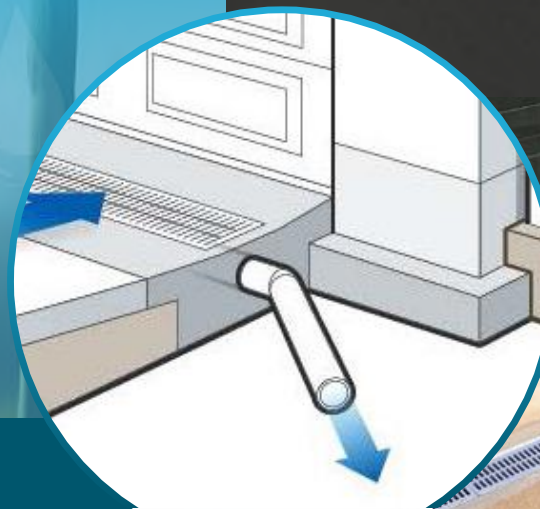

The **Typical** Solution

- ✗ Corrugated plastic drain lines that are prone to failure
- ✗ No real corrections of the primary, underlying issues
- ✗ Interior system or sump pumps that do not keep water out of your home
- ✗ Maintenance required constantly for operational integrity
- ✗ No real peace of mind

VS

The **Advanced** Solution

- ★ Durable PVC drain lines that can last a lifetime
- ★ Drainage corrections designed to address the underlying problem
- ★ Dependably channel stormwater away from your home
- ★ Only simple, routine maintenance required for most systems – zero maintenance on others
- ★ Long-term peace of mind

Product Spotlight: Channel Drains capture stormwater around your home, and can be customized specific to applications in driveways, walkways, patios, pool areas, etc.

We send stormwater
where it belongs

Low Impact Installations...

Clean, turnkey installation is a huge benefit when dealing with drainage system installations. Our crews install drainage systems with minimal impact to your property. The same care and professional approach to installing a drainage system is used in the final cleanup and detailing the appearance of your yard. We treat your yard as if it were our very own!

High Performance Products...

Poor drainage is the number one cause of damage to homes. Proper high quality drainage corrections can provide total peace of mind to otherwise very frustrating issues. Once our team completes a custom designed install, you can expect **Lifetime Drainage Relief**.

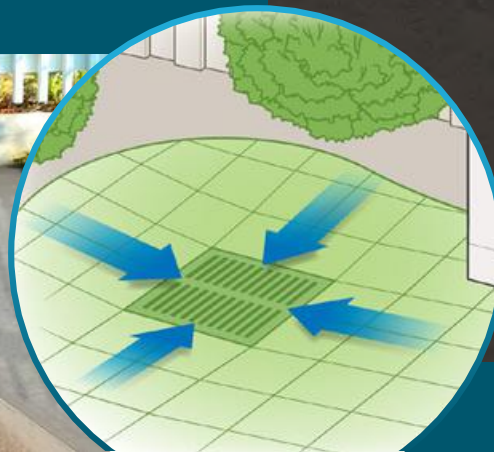

We offer the best solution
by using the **best products**

Downspout Drain Lines

Catch Basins & Channel Drains

PVC Drain Lines

- French Drains
- Backfill Restoration
- Grading & Swales
 - Sod
- Dry Creek Beds
- Patios & Walkways
- Retaining Walls
- Horizontal Drilling, Utility Locating, Camera Inspections
- Gutters, Gutter Covers & Downspouts

Product Spotlight: Catch Basins can be used in grass, landscape or hardscape areas to collect and remove groundwater. Flat, atrium, or steel grates can be used depending on the application.

Product Spotlight: Retaining Walls effectively divide your landscape and allow for grade type corrections. Retaining wall materials can be selected to fit the budget and aesthetic appeal required for the landscape. Common wall types are Modular block, Pressure-Treated Timber, or Dry-Stack Boulders.

Dry-Stack
Boulder Wall

Our customers love our work

“These guys came when they said they would, finished in good time, and the day after they installed drainage, we had the biggest downpour of the year, lakes in the streets. I went down into the basement, where water had been literally pouring through the foundation wall, and – NO WATER! It was an immediate acid test of their work, and they passed with an A grade.” – Ellen M.

“We had an improperly graded side yard left by our contractor. I called Advanced Drainage Solutions due to good reviews online. They came out and gave me a same day quote. Their quote included everything to get the job done correctly (not a band-aid solution.) I trusted them and they delivered what they said they would. I have not had a single water issue from the day they finished. Very pleased with the level and quality of service. I highly recommend.” – Kellen M.

“Outdoor Drainage Solutions fixed my drainage problem on the side of my house. They were very professional, backed their work, and was there on the day they committed. I was very pleased with their work and my drainage problem is fixed!” – Tony M.

“On time and on schedule, quiet, friendly, careful...I could go on and on. Honestly, I can’t imagine what my yard would have looked like without the work Advanced did. Michael even reached out after Irma to see how the drain and gutters worked.” – Matt C.

Product Spotlight: French Drains consist of perforated PVC pipe, woven geotextile filter fabric, and drainage rock. While not right for all locations, French Drains do collect and remove groundwater, reducing ground saturation and lowering the localized water table.

Corrugated plastic compared to **quality PVC drain lines**

Product Spotlight: PVC Drainage Systems are highly durable and practically maintenance-free. We use thick-walled PVC to replace failed corrugated piping, which is often the culprit in a failed or clogged drainage system.

VS

Corrugated Drain Lines

- ✗ Move a very limited amount of water
- ✗ Leach water at the fittings, allowing root growth inside the pipe
- ✗ Crush easily under the weight of the soil
- ✗ Clog easily from sediment and solid material
- ✗ Form “bellies” that trap sediment and encourage clogging
- ✗ Last only 3 to 8 years

Thick-Wall PVC Drain Lines

- ★ Move three times as much water as corrugated pipes
- ★ Use solvent welded fittings that don't leach water
- ★ Won't break under the weight of the soil or equipment
- ★ Move sediment and debris easily
- ★ Don't sag or trap solid material inside the pipe
- ★ Durable, and capable of lifetime performance

Product Spotlight: Dry Creek Beds are designed to control groundwater while also providing an aesthetic touch to your landscape. Dry creek beds can be designed in any size or color, and may include French Drains or Catch Basins to further collect and remove surface water.

Product Spotlight: When more aggressive repairs are necessary, **Grading and Swales** channel water away from your home and protect your foundation from water damage. Grading and swales can eliminate the need for other drainage repairs and provide a permanent and natural correction.

Product Spotlight: Your **Gutters & Downspouts** are the beginning of an effective drainage system. We have over 25 years in the business of repairing and installing gutters, downspouts and covers of all shapes and sizes. Specializing in all gutter repairs, gutter covers, or new seamless aluminum gutter installations.

Product Spotlight: As a part of drainage projects, we often install **Patios, Walkways, Steps,** and other **Hardscapes** to aid in the overall function and flow of your outdoor living spaces.

Protect the value of your greatest investment. Contact us now for **Lifetime Drainage Relief.**
